SOURCE

1. No aircraft were stationed at Finsterwalde airfield.
2. The extension work in the western part of the field seemed to have been completed since this section already has a grass cover and the construction huts had been removed. An embankment, about 1 1/2 meters high, which is indicative of runway lighting or drainage facilities, parallels the runway in this section of the field. Construction work appeared to be centered in the eastern half of the field. Sand and crushed stones are piled there and narrow-gauge rails, cement mixing machines and construction huts were also seen. Completed repair work was noticed at some hangars. Labor details of six to eight men were working in front of the hangars, presumably reconditioning the concrete aprons.

25X1X

3. The number of workers seemed to have decreased. An [REDACTED] the opinion that the field will not be serviceable before mid-October 1950. *
